Substrings

Figure Execution of `strncpy(result, s1, 9);`

Substrings

Figure Execution of `strncpy(result, &s1[5], 2);`

Substrings

char last [20], first [20], middle [20];

char pres[20] = “Adams, John Quincy”;

strncpy (last, pres, 5);
last[5] = '\0';

strcpy (middle, &pres[12]);

strncpy (first, &pres[7], 4);
first[4] = '\0';

J	o	h	n	\0	?	?	?	?	?	?	?	?	?	?	?	?	?	?
---	---	---	---	----	---	---	---	---	---	---	---	---	---	---	---	---	---	---

Buffer Overflow

- more data is stored in an array than its declared size allows
- a very dangerous condition
- unlikely to be flagged as an error by either the compiler or the run-time system

char string[8] = "hello world";

h	e	l	l	o		w	o	r	l	d	\0
---	---	---	---	---	--	---	---	---	---	---	----

Concatenation

➤ strcat

- appends source to the end of dest
- assumes that sufficient space is allocated for the first argument to allow addition of the extra characters

➤ `s1 = "hello";`
➤ `strcat(s1, "and more");`

h	e	l	l	o	a	n	d		m	o	r	e	\0
---	---	---	---	---	---	---	---	--	---	---	---	---	----

Concatenation

➤ strcat

- appends up to n characters of source to the end of dest, adding the null character if necessary
- assumes that sufficient space is allocated for the first argument to allow addition of the extra characters

➤ `s1 = "hello";`

➤ `strncat(s1, "and more", 5);`

h	e	l	l	o	a	n	d		m	\0	?
---	---	---	---	---	---	---	---	--	---	----	---

Concatenation

```
char k1[15] = "John ",  
      k2[15] = "Jacqueline ",  
      last[15] = "Kennedy";  
strcat(k1, last);  
strcat(k2, last);
```
